

Datre Maintenance Desk – User Guide

Oct 4, 2026 · @indranil Dutta

One app for the whole maintenance team: breakdowns, daily job card, machine status, spares, indents and downtime. Everything is typed in the app; nobody needs Excel or Google Sheets.

1. Open the app (first time only)

1. Tap the app link pinned in the Maintenance WhatsApp group, or scan the QR poster.
2. If it opens inside WhatsApp, tap : → **Open in Chrome**.
3. In Chrome tap : → **Add to Home screen** → **Add**. An app icon appears on your phone.
4. Open the icon. At the top right, pick **your own name**.
5. From now on, open the app from the icon only.

The small badge at the top shows the connection: **synced** = all good; **Offline · 2 to send** = keep working, it sends when network comes back.

2. Every shift: your Job Card (technicians)

1. Tap **Job Card**. It shows today's checks for your machines: DAILY, WEEKLY and MONTHLY.
2. For each check tap **OK**, **NOT OK** or **N/A**.
3. If all checks on a machine are fine, tap **All remaining OK**.
4. For **NOT OK**, type what is wrong (reading, location), then tap **Raise breakdown**.
5. At the end of the shift tap **Submit job card**.
6. Breakdown jobs assigned to you appear at the top of your job card.

3. Machine stopped? Report a breakdown

1. Tap the red **Report breakdown** button (bottom right, on every screen).
2. Pick the **machine**, **Mechanical / Electrical**, and whether the machine is **stopped** or still running.
3. Pick the **problem** from the list (or Other), add details, tap **Report now**. The downtime clock starts.
4. Open it from **Breakdowns** and tap the status as work moves: Attending → Waiting for spares → Under trial.

5. When the machine runs again tap **Close — machine back in service**, pick the **root cause**, and write the work done and spares used.
6. Need a spare? Type it in Spares needed, then tap **Raise indent for spares**.

4. Machine status and predictive actions

1. Tap **Machines**. Each card shows status (Running / Watch / Breakdown / Under PM / Idle) and a health bar for Mech and Elec.
2. Tap a machine to change its status or write a reading (e.g. bearing temp 64 °C).
3. Under **Mechanical** or **Electrical**, open **What are you seeing?** and pick the symptom.
4. The app shows the **recommended action**, how urgent it is, and the related spare's stock.
5. Tap **Log as defect / breakdown** or **Raise indent** straight from there.
6. **Predictive actions** (top of Machines) lists every machine's likely failure and next action, worst health first.

5. Spares: issue, receive, check stock

1. Tap **Spares**. **Critical spares** shows stock against minimum; red = below minimum.
2. **Stores list** has every item; search by name or number (e.g. 22216).
3. To issue or receive: tap the **quantity** → enter **Issued** or **Received** (or a physical count) → pick the machine → add the issue slip / GRN no. → **Save**.
4. Every entry shows under **Recent issues & receipts** with time and name.
5. Below minimum and no order yet? Tap **Indent** on that row.
6. Stores in-charge / manager only: **Update stock from Tally** → upload the Tally Stock Summary Excel, or paste its rows → check the item count → **Replace stock list**. Do this right after stores entries are posted in Tally.

6. Indent and vendor enquiry

1. **Raise**: Sourcing → + **New indent**. Type the item; pick from the suggestions. Add specification, machine, quantity and required-by date.
2. **Vendors**: the app shows who supplied this item before, with email and phone. Tick the vendors to ask. Add any other vendor email in the box.
3. Technicians tap **Raise indent**. It gets a number like IND/MNT/26-27/001 and waits for release.
4. **Release (Anwasha, Pallab, Monotosh, CEO)**: you get an alert *Indent waiting for release*. Open it, check, tap **Release indent & send enquiry**.

5. One email per vendor goes from **purchase@datre.com** in Anwesha's name, asking for price, GST, make, delivery, freight and payment terms within 3 days.
6. Vendors with no email but a mobile number get a **WhatsApp** button with the same enquiry.
7. Move the indent along as it happens: Quotation → PO approved (enter vendor, PO no., ETA) → Dispatched → Received.
8. Overdue ETAs turn red and show in alerts.
9. **Vendors** tab: search any item or vendor to call, WhatsApp or email them.

7. Managers and supervisors

1. **Today:** machines running / breakdown / watch, PM checks done, downtime this month, and all **alerts**. Tap ✓ **Ack** on an alert once you have seen it.
2. **Verify job cards:** Job Card → pick the technician and date → **Supervisor verify**.
3. **PM Plan:** month chart of all checks per machine. Green = done, red = NOT OK, red outline = missed. Shows compliance %.
4. **Downtime:** hours per machine per month, filled from breakdowns automatically. Tap a cell to add hours missed earlier. **Copy as CSV** for Excel.
5. **Daily Update:** ready report of the day. Tap **Copy** or **Share on WhatsApp** and post it in the group.
6. **Setup:** team names, roles and trade (Mechanical / Electrical / No job card), shift hours, email list.

8. Golden rules

1. Always pick **your own name** at the top right before entering anything.
2. Machine stopped = report it **immediately**, not at shift end. Close it as soon as it runs again; downtime is counted from these times.
3. Every NOT OK check needs a short note of what is wrong.
4. Every spare taken from stores is entered in the app with the machine.
5. A red **View only — entries will NOT be saved** banner means you opened the wrong link. Use the link pinned in the WhatsApp group.
6. Help: Pallab Halder, Maintenance Manager.
